

Self-Maintenance Guide

We have put together a quick guide to help you maintain at home and with a list of products needed

	<p><u>Davlyn Red Liner Tape</u> This is a liner tape and helps with cleaning the piece after. This tape is placed 1st all along the perimeter of the hairpiece. Do NOT use at the front hairline. Always remember to remove the backing as this is a double sided tape</p>
	<p><u>Super tape 1" x 3 Yards</u> This is the strongest tape. This is placed on top of the Davlyn Red Liner tape. Place all along the perimeter of the hairsystem. This is double side so remove the backing.</p>
	<p><u>Walker Non-Shine Tape</u> This tape is to be used at the FRONT only. Remove the backing and attach top the lace part at the front hairline. Use another tape and cut in half to fill the gaps on either side of the front hairline. When applying this tape to the front, place this tape a few mm behind the front of the lace. Do not place directly on the edge of the front lace.</p>
	<p><u>Walkers Scalp Protector Spray</u> When you have taken the system off and cleaned your head. Before attaching the cleaned hair piece apply Scalp Protector on your head and leave for 5 minutes before attaching the hair system on top</p>
	<p><u>Walkers Lace Release Spray</u> This is a cleaning spray. To be used to help take the system off and once off and tapes removed you can use this along with cotton wool to rub off any excess residue or tape residue from the system and clean the lace at the front</p>
	<p><u>Walkers Mity - Tite</u> This glue is to be used for the front. Tapes is better but for a stronger attachment at the front, once the Non Shine tape is placed on the front lace you can apply a small amount of this glue on top of the non shine tape or at the front of your own head where the front part of the system will sit. Use a small amount and be careful, as the glue is stringy so wrap around the stick until any excess residue is off the stick before applying.</p>

	<p><u>TDI Knot Sealer</u> This is not essential product but very useful. This help prevent shedding of hair around the lace middle or front area. Once system is cleaned spray this in the inside of the hair system onto the lace areas and use a hairdryer to dry This help seal the knots.</p>
	<p><u>Sentoo Spray</u> This is a leave in conditioner and can be used as many times as you like. Shake bottle before use. Apply evenly on your hair once dry and style as required.</p>
	<p><u>C22 Spray</u> This is to be used when you take the whole system off your head. Once off use cotton wool to dab the inside of the hair system and rub any excess glue or tape residue off. The spray the C22 and leave for 5 mins to soak. Once done apply more cotton wool and rub off any glue/ tape residue. If you have a front lace be gentle but some force is allowed. Also support the piece when rubbing any glue or tape residue as to not rip or tear the material.</p>

Helpful Tips:

Removing the system

Peel off the system from your head. If you are finding this difficult then use the Walkers Lace Release and spray under the system then slowly peel it off.

Once removed use cotton wool and try and grab under the 1st layer of tape and remove the tape all around. This should come off easily. Any excess tape residue or glue spray some lace release onto the area and use cotton wool in circular motions to rub off any excess tape or glue residue.

Once cleaned wash the system with 2 x shampoo and 1 x conditioner the wrap in a towel and towel dry. Remove the system from the towel and use a hairdryer to dry the system and give it a little brush. Spray TDI Knot sealer all onto the lace part and then a hairdryer to dry (this is not essential but can help with preventing shedding)

Attaching the system

Once cleaned. Use the red liner tape and place all along the perimeter of the system (not the front lace part). Overlap the tapes slightly. Remove the backing. Then apply the super tape (white) tape all long the perimeter on top of the red tape and over lap once again. For the corners you can snip the two corners of the tape so it can fit easily around the corner edges of the system.

Apply the non-shine tape at the front hairline. Cut another tape in half to place on either sides of the front lace system to cover the edges.

Placing the system on your head.

Use a crayon to mark a dot on the front where you want the hairline to be. Align the hair system so the middle is aligned with the centre of your head and use your fingers to push the front onto the dot you have marked. Slowly place the system back and make sure your fingers are aligned straight so you know the hair system is being placed correctly.

Use a mirror to check the back and sides is all covered with no gaps

Use a leave in conditioner and any hair products to style the hair

Lifts/ Touch – Ups

If you get any lifts on the back and sides, do not worry as the whole thing will not come off and this is quite normal. You can carefully apply some Ultra-hold, or Davyln glue under the system and stick back down. The glue is very runny so ensure you swirl it around before applying.

If the front lifts, try to press down and if not sticking then lift the front hairline and either pin back with a clip or just hold it back. Clean any excess glue or residue from your forehead and if any on the lace front, use cotton wool to rub or wipe off any excess glue residue.

Apply Ultra hold, Davyln or white glue on your forehead only where the front lace will cover. Allow drying, then placing the front lace onto it and pushing down. Once again be careful when applying the glue. If there is tape at front you can lift the tape at front and do as above the press down. You can also try and remove the tape at the front then apply tape under or apply glue to forehead and stick the lace directly onto it once dried.

TIP: If you get any glue in the hair. Use a fine toothcomb and spray some lace release onto the comb and comb out any hair stuck underneath or in the glue. Also can spray lace release on your fingers and rub into the hair where there is glue stuck and gently try to rub the glue out.

Looking after the hair (Hair Care Kit / Guide)

IF YOU DID NOT PURCHASE THE HAIR CARE KIT OR THE PRODUCTS MENTIONED BELOW, ALTERNATIVE SHAMPOO AND CONDITIONERS CAN BE USED BUT ENSURE THEY ARE SULFATE/SULPHATE FREE. ANY LEAVE IN CONDITIONER CAN BE USED ALSO BUT AGAIN ENSURE ITS GOOD FOR HAIR.

Use the IQ Shampoo & Conditioner once a week. Under a shower wet hair and apply the IQ shampoo on your palm and evenly distribute over your hair using the tips of your fingers. You can also use a brush to brush the hair and remove any knots. Use a brush with bobble ends so not to tear the material of the hair system.

Apply 2 x shampoo and follow by the IQ Conditioner.

After washing brush or comb your hair through under the shower to remove any knots. Once done gently pat down the hair with a towel and towel dry. DO NOT rub vigorously be gently and pat the hair with a towel gently

HAIR STYLING - Sentoo Spray / Hair Spray / Hair Wax Use the Santo Spray as many times as you wish for styling and moisturising your hair. Generally, once or twice a day is sufficient Shake the bottle and spray onto your hair once dry and style as desired.

Every morning when you wake up to resolve the bed hair. Spray the Santo Spray on your hair and brush or comb through to a desired style.

If you want more style or remove any dryness/ frizz in hair apply a small amount of wax pomade on your palm and spray some Santo spray on your palm also. Rub the two together to create a paste and apply to your hair. Finish off with Hair Spray. The hair spray locks in a style but does not clog up your hair and brushes out easily so can be used daily.

The next morning you can do the same again or simply apply the steno spray and hairspray top style.

The IQ Hair Serum or any oils such as Argan oil etc can be used any time as a styling product if you feel your hair is dry and requires some shine
